

# Deployment process for a WordPress website using Nginx as the web server

## Description:

- 1 EC2 instance, deploy word press and MYSQL on the same instances.
- Configure the necessary security group for the instances.
- EC2 instance type: t2-micro, AMI: ubuntu-.\*.
- Create a welcome page in wordpress that will be the homepage.

## Launch an AWS EC2 Instance:

- Log in to your AWS Management Console.
  - Navigate to the EC2 Dashboard and click on “Launch Instance”
  - Give the instance name as “wp-server”.
  - Select Amazon Machine Image (AMI) that fits your needs.
  - Choose an instance type based on your requirements. I will choose a “t2.micro” instance.
  - Configure instance details, such as the number of instances, network settings, and storage.
- Make sure to add a security group that allows HTTP (port 80) and HTTPS (port 443) inbound traffic.
- Review the configurations and click on the “Launch instance”

## Commands:

### 1. Updating the package list

```
sudo apt update
```

### 2. PHP, MySQL and Nginx installation

```
sudo apt install php-fpm php-mysql mysql-server nginx unzip
```

### 3. Configuring Nginx to work with PHP

```
cd /etc/nginx/sites-available
```

```
sudo rm default
```

```
sudo nano default
```

```
server {  
    listen 80;  
    server_name your_server_domain_or_IP;  
  
    root /var/www/html;  
    index index.php index.html index.htm;  
  
    location / {  
        try_files $uri $uri/ =404;  
    }  
  
    location ~ .php$ {  
        include snippets/fastcgi-php.conf;  
        fastcgi_pass unix:/var/run/php/php8.3-fpm.sock;  
        fastcgi_param SCRIPT_FILENAME $document_root$fastcgi_script_name;  
        include fastcgi_params;  
    }  
}
```

#### 4. Restarting Nginx

```
sudo systemctl restart nginx.service
```

#### 5. Removing the default index.html page

```
cd /var/www/html
```

```
sudo rm index.nginx-debian.html
```

#### 6. Downloading Wordpress to the Ubuntu server

```
sudo wget https://wordpress.org/latest.zip
```

#### 7. Extracting the contents of the Wordpress archive

```
sudo unzip latest.zip
```

#### 8. Moving WordPress to the server's root folder

```
sudo mv wordpress/* .
```

#### 9. Changing the owner of the Wordpress files

```
sudo chown -R www-data:www-data *
```

#### 10. Securing MySQL installation

```
sudo mysql_secure_installation
```

#### 11. Creating the database and a database user

We first need to start MySQL:

```
sudo mysql
```

Create the database for WordPress

```
CREATE DATABASE wordpress_db;
```

Database user:

```
CREATE USER 'wordpress_user'@'localhost' IDENTIFIED BY 'P@55word';
```

grant privileges to the user on the database:

```
GRANT ALL PRIVILEGES ON wordpress_db.* TO 'wordpress_user'@'localhost';
```

```
Exit;
```

#### 12. Installing WordPress

We can now visit the server's IP address and use WordPress's built in installer.

We will need to provide the database and username we just created.

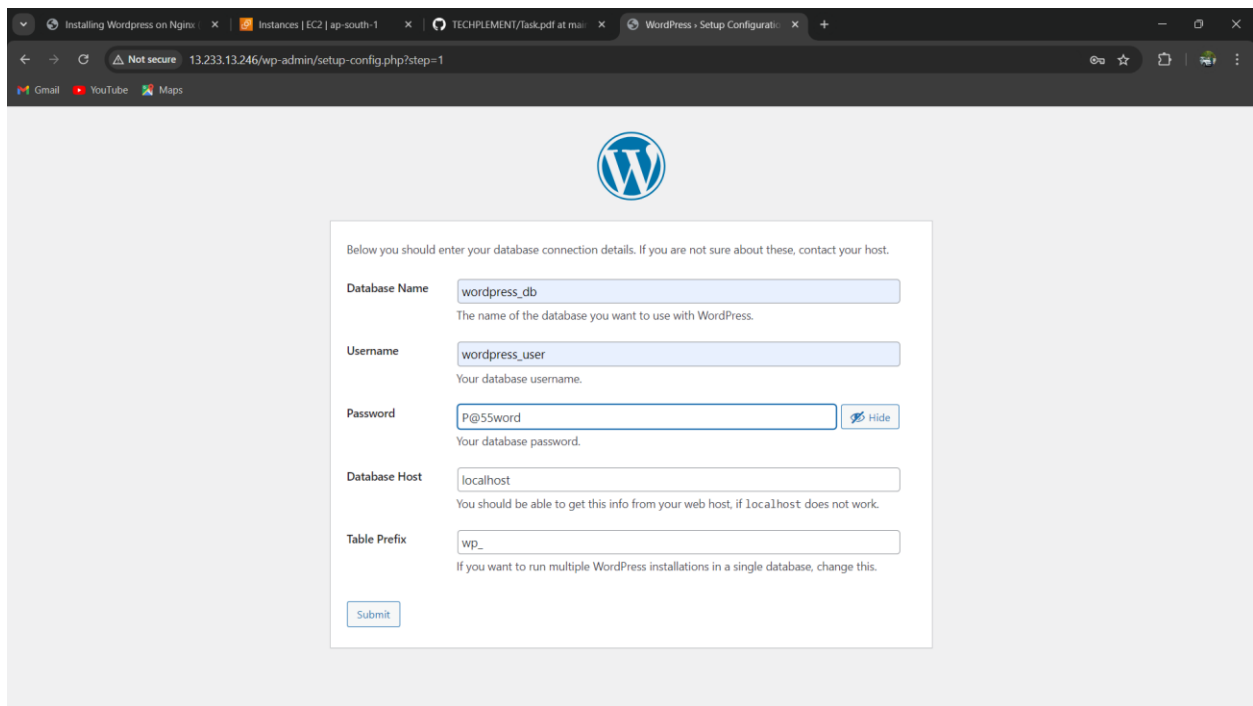

### 13. Creating wp-config.php

```
sudo nano wp-config.php
```

Then copy the content of the file from the WordPress installer and paste it into your file.

click on "Run the installation"

Open your browser and navigate to your WordPress instance's public IP address. Follow the WordPress installation wizard to complete the setup.

The screenshot shows a web browser window with the URL `13.233.13.246/wp-admin/setup-config.php?step=1`. The page features the WordPress logo at the top. Below it, a text box instructs the user to enter database connection details. The form contains the following fields and values:

- Database Name:** `wordpress_db` (with a note: "The name of the database you want to use with WordPress.")
- Username:** `wordpress_user` (with a note: "Your database username.")
- Password:** `P@55word` (with a "Hide" button and a note: "Your database password.")
- Database Host:** `localhost` (with a note: "You should be able to get this info from your web host, if localhost does not work.")
- Table Prefix:** `wp_` (with a note: "If you want to run multiple WordPress installations in a single database, change this.")

A "Submit" button is located at the bottom left of the form.
